

Lightning

Lightning® is a highly visible permanent electric fence engineered for durability and resistance to wear. Lightning® installs like high tensile wire but offers far greater protection to horses. Any number of line wires can be installed and the system easily combines with other Centaur and Tornado fences.

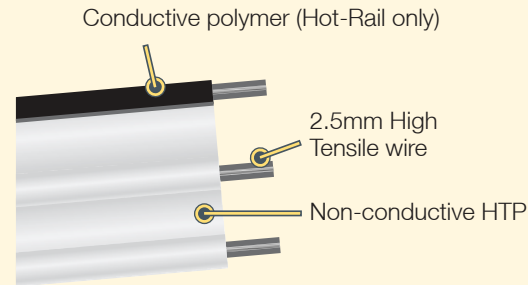

Centaur HTP®

Centaur High Tensile Polymer is the original Centaur fencing system. Perfect for perimeters, race tracks, arenas, walkways, corrals and other dividing fences, it incorporates a patented insulated 'belt loop' bracket with a steel core which the rail slips through to disperse the effects of any sudden impact.

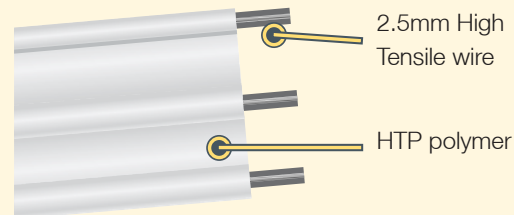

Centaur HTP Hot-Rail®

Hot-Rail® is an innovative fencing product that combines the patented Centaur HTP® technology with electric fencing, significantly improving the appearance and lifespan of electric fencing products currently available.

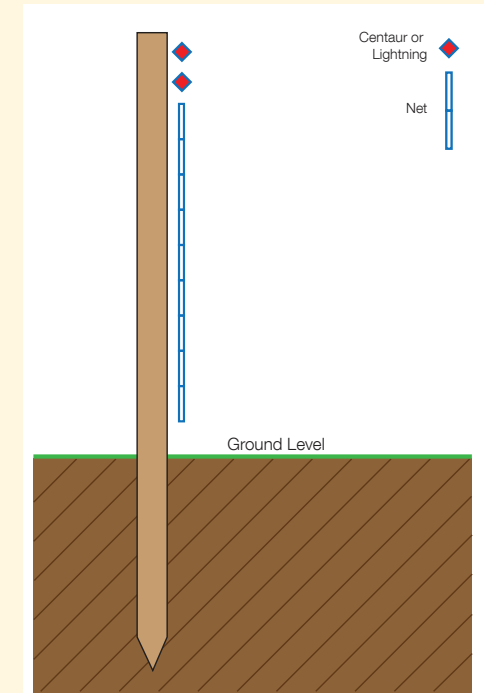

Centaur CenFlex™ HTP®

CenFlex HTP® is a lighter alternative to the traditional Centaur HTP®. It utilises the same cross-linked polymer technology and is ideal for use in areas of reduced pressure or when fencing on a budget.

Installation Guidelines for Centaur or Lightning

Centaur or Lightning can be used in conjunction with Tornado Horse Fencing in a variety of configuration options to suit height and visibility requirements.

When installing wire above stock netting we would recommend using one or two strands of Centaur or Lightning.
